Slowing down is also playing.
Watching, repeating, staying a little longer.

In a fast-moving world, we choose to pause.
Because play isn't about rushing. It's about letting go.

MOVE BOTTLE WHALE CALM

They say that if you shake it gently, the sea awakens.
Can you follow the whale with your eyes as currents rise and fall,
playing hide and seek as it appears and disappears?

A small world of calm where something is always happening... quietly.

MOVE BOTTLE AUTUMN

You could shake it endlessly, but the magic lies in watching it fall slowly.
That's where everything happens— rising, falling, spinning...
and without noticing, your rhythm changes too.

Your gaze lingers, your breathing slows, and time stands still.
And every time you move it, it all begins again.

Move Bottle Autumn
Page 27

MOVE BOTTLE PETIT PRINCE

A little piece of the Little Prince's sky, kept inside a bottle. There is a moment, just before the stars stand still, when the sky seems to breathe. Inside this bottle, that instant is still alive: the calm, the glow, the silence of the universe.

CALM DONUTS

There are colors that are not only seen but also felt. They move slowly in your hands, following your gesture—without noise, without rush. A rainbow that isn't explained, but experienced. And here too... something is always happening.

SENSORY PUZZLE WHALE & BABY

This is not just a puzzle.
It's a scene that builds little by little.
One big whale, one small one...
a story that unfolds without being told.

Sensory Puzzle Whale & Baby
Page 56

SENSORY ROLLER

Everything begins with a gesture.
Push... and watch how the world moves.
Like waves: they appear, disappear, and begin again.

MY FIRST TOY

My First Toy
Ref: 47663

My First Toy contains two products inspired by Picklerian pedagogy and designed for babies from three months onwards: a lightweight, brightly coloured cotton scarf and a Sound Bottle sensory bottle..

My First Toy stimulates the baby's sight, hearing and motor skills, while encouraging free and spontaneous play. The light fabric of the scarf allows the baby to feel satisfied when they realise they can grasp something with their hands. In addition, the contrasting colours of this eye-catching polka dot scarf help to stimulate their still-developing vision. To play with it, it can be placed near the baby in a mound shape while they are lying down, making it easy for them to see and grab.

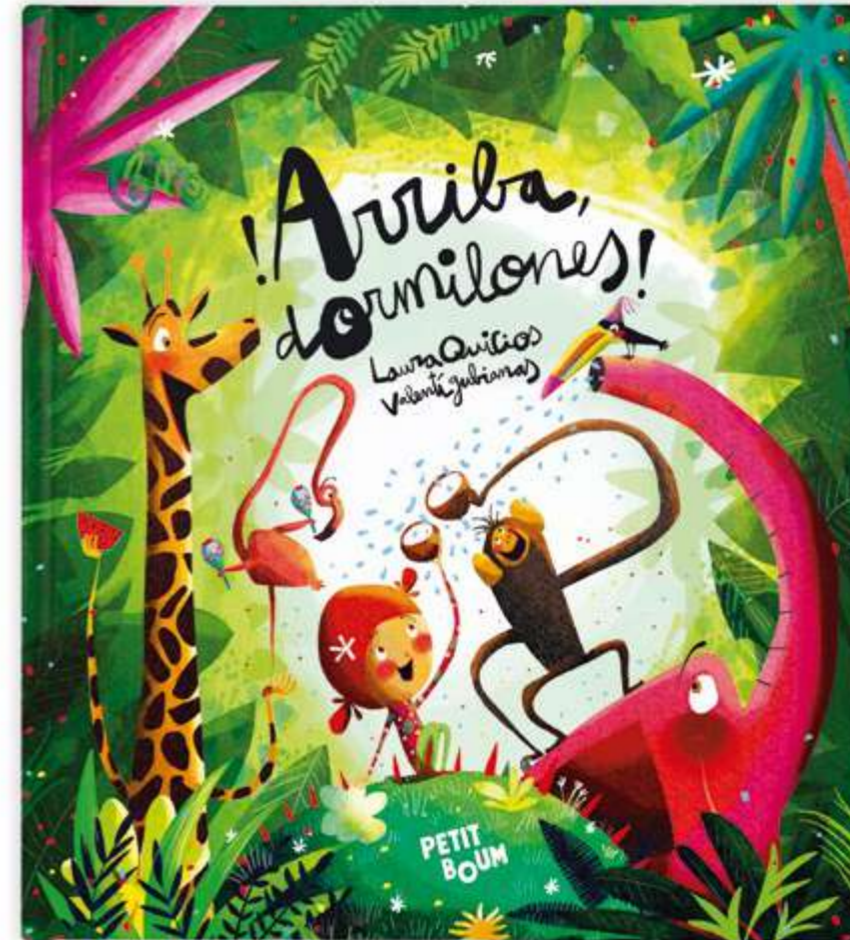

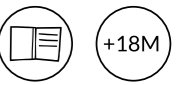

The scarf encourages the baby's spontaneous activity; they will quickly notice it and bring it to their mouth to explore. The Sound Bottle, created with the same colour scheme as the scarf, produces stimulating sounds that offer a unique sensory experience. To start playing with the Sound Bottle, simply shake it. When shaken, the elements inside create pleasant sounds that encourage the baby to follow the objects with their eyes and identify the different noises they make.

Our bottles accompany the baby throughout their development and invite experimentation and concentration.

Bottle size: 15,5 x 4,5 cm / **Capacity:** 250 ml
Fully sealed with double safety cap
Handkerchief size: 35x35 cm

WAKE UP, SLEEPYHEADS!

Wake up, sleepyheads!

Sound Bottle Dragon
Ref: 85740

Wake up, sleepyheads! is our first book for all Petit Boum fans. The adventure continues in our Sound Bottle Dragon, which includes their new protagonist (a clue: it has wings and spits fire!).

Material: Cardboard
Pages number: 36 pages
Size: 23 x 26 cm
Weight: 367 gr

WOW BOTTLE

Wow Bottle
Ref: 47654

COLOR, TEXTURE AND MAGIC

WOW! is an endless universe for sensory stimulation that unfolds in front of kids and adults so they can experiment, create and imagine all while playing.

WOW! builds upon a basic element, sensory rice, and a set of tools and accessories. These can be combined with other objects and toys to expand even further their possibilities and to create miniature worlds for free and accompanied play.

Size: 25 x 7,5 cm / **Capacity:** 1 litro
Content: 800 gr / It opens easily

Contains:

- Coloured sensory rice
- Biodegradable paper bag with a spoon, a bowl, tweezers, a shovel and a brush
- Paper cards with game proposals
- Insect stickers
- Pom Poms

PETIT
BOUM

SENSORY BALLS

Sensory Balls
Ref: 47661

This selection of five balls offers varied unique sensory experiences thanks to the different natural materials chosen for each of them: metal, wood, wool, cork and cotton. Different weights, dimensions, temperature feelings and textures that bring endless possibilities for free and imaginative play.

From a very young age, children are naturally attracted to everything that moves and they are even more fascinated by the continuous movement of rolling objects. Therefore, these sensory balls are the door to a spontaneous play with which children will improve their motor skills and hand-eye coordination. Safe and easy to handle, these balls will help babies discover concepts such as distance and speed, train their strength and coordination. They will also stimulate crawling.

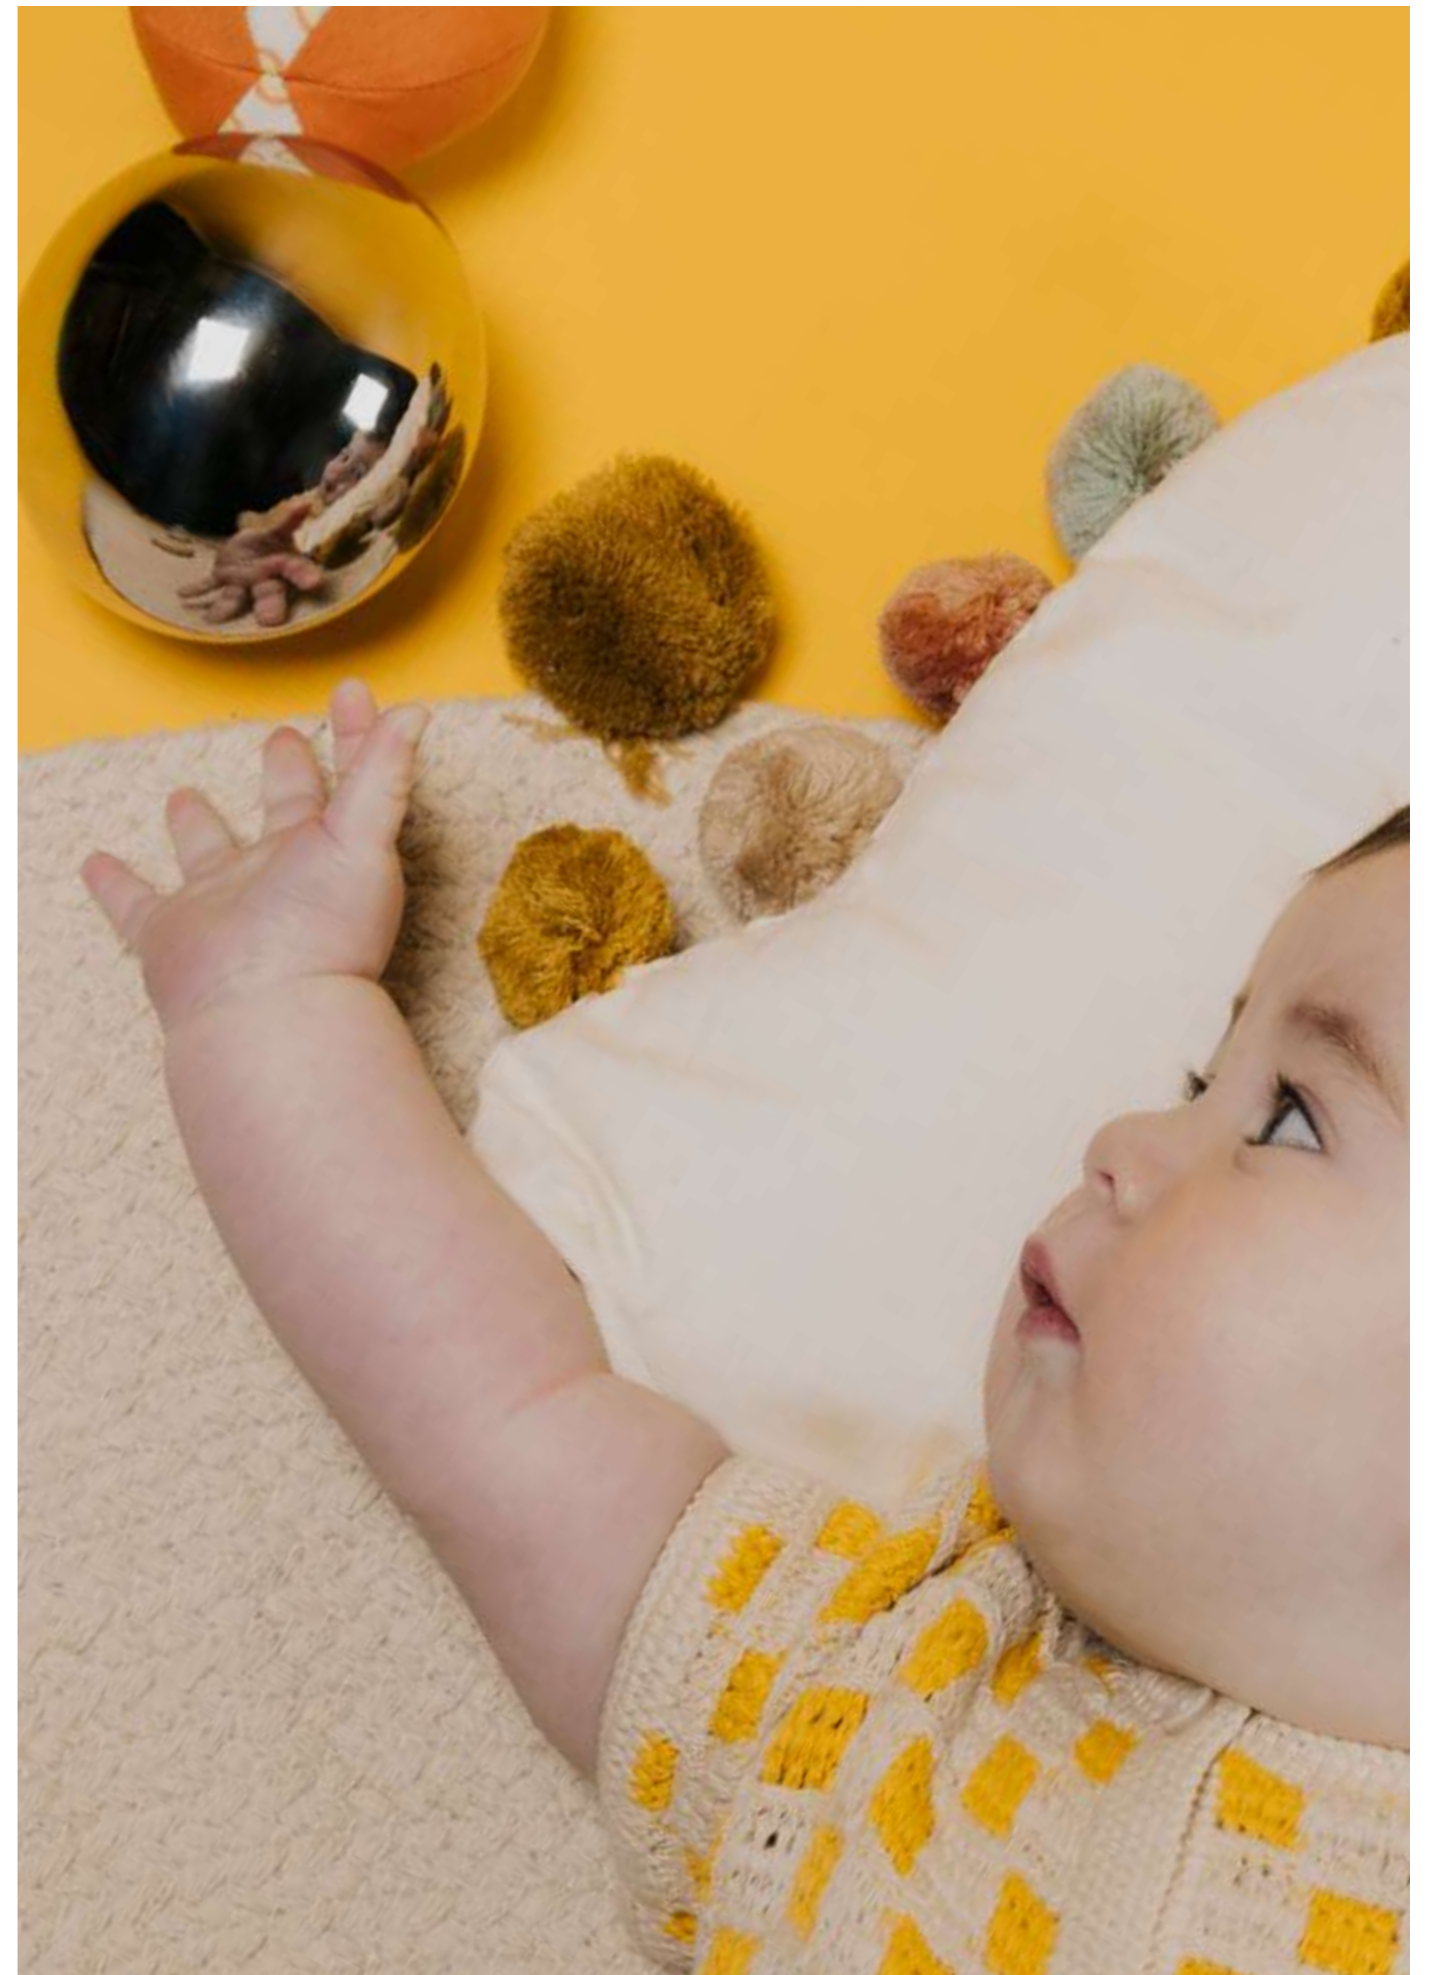

Beyond the benefits on motor, visual and tactile skills, playing with sensory balls allows children to feel they are in control of something beyond their own movements. Moreover, it improves their understanding of individual and social play: rolling a ball on the floor is a way to build a social bond between two people. It is also a lesson that children learn and which is necessary for their development: cause and effect or action-reaction.

Palm Leaf Basket
Ref: 47662

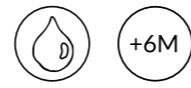

PALM LEAF BASKET

Ball diameters and materials:
metal (9 cm), cotton (8 cm), wool (7 cm), cork (6 cm) and wood (5,2 cm)

HAPPY BUBBLES

Three unique sensory balls, with our unmistakable touch, where frogs, crabs and ducklings swim alongside your baby among magical sparkles. Splashes, surprises and moments of fun in the bath or the pool!

WHY PETIT BOUM

SENSORY STIMULATION

We are born with an immature sensory and cognitive system which has huge potential. Our sensory toys are wonderful companions for the adventure of development.

Sight

The combination of elements and objects has been designed so that the small ones can track them with their eyes as they move.

Hearing

The manipulation of our toys generates sounds that please and stimulate small kids. Different to rattles and other products, the bottles and sensory toys allow the kid to identify and match those sounds with the different pieces found in them.

Touch and psychomotor skills

The weight, shape and size of our sensory toys are adapted so that kids can manipulate it, shake it, roll it... In this way they train their eye-hand coordination, brain lateralization and crawling abilities.

FAVOURS CONCENTRATION AND CALM

Watching the light and how glitter descends slowly kids can relax and focus in moments of agitation and anxiety.

SUPPORTS DEVELOPMENT

From the very first stimuli and babbling up until crawling and first words, Petit Boum is an evolutive toy that will support your baby with different stimuli and possibilities during the different development phases.

IT IS SAFE AND SUSTAINABLE

Our bottles and sensory toys are recyclable and comply with the strictest safety certifications (EN71 and CE - European Community). They are free from metals, BPA and phthalates, and children can handle and chew them without any risk. The interior is sealed and includes a second wooden stopper, ideal for little hands and very pleasant to the touch.

KM O

90% of proximity suppliers. In this way we can know the working and production conditions to guarantee the highest quality and less ecological impact.
